

LumaStar is a high-density sheetfed offset ink for high-quality printing. It combines high gloss with excellent drying performance for visually demanding work where rich colour and a polished finish are central to the result.

HIGH DENSITY

Rich, impactful colour

HIGH GLOSS

For premium presentation

EXCELLENT DRYING

For demanding print work

PRODUCT PROFILE

Printing process	Sheetfed offset
Product positioning	High-density / high-quality
Gloss	High
Drying performance	Excellent

APPLICATIONS & SUBSTRATES

Premium brochures, catalogues, presentation folders, image-led publications and high-quality promotional print.

Smooth coated paper and board are recommended candidates when gloss is a priority. Trial other paper-based stocks before production; absorbent surfaces can reduce gloss.

Choose LumaStar when high optical colour density and a high-gloss finish are the priorities.

PRESSROOM GUIDANCE

Keep dampening at the minimum level needed for clean printing. Control ink film thickness, stock condition and delivery pile height; check set-off and drying before finishing.

STORAGE & HANDLING

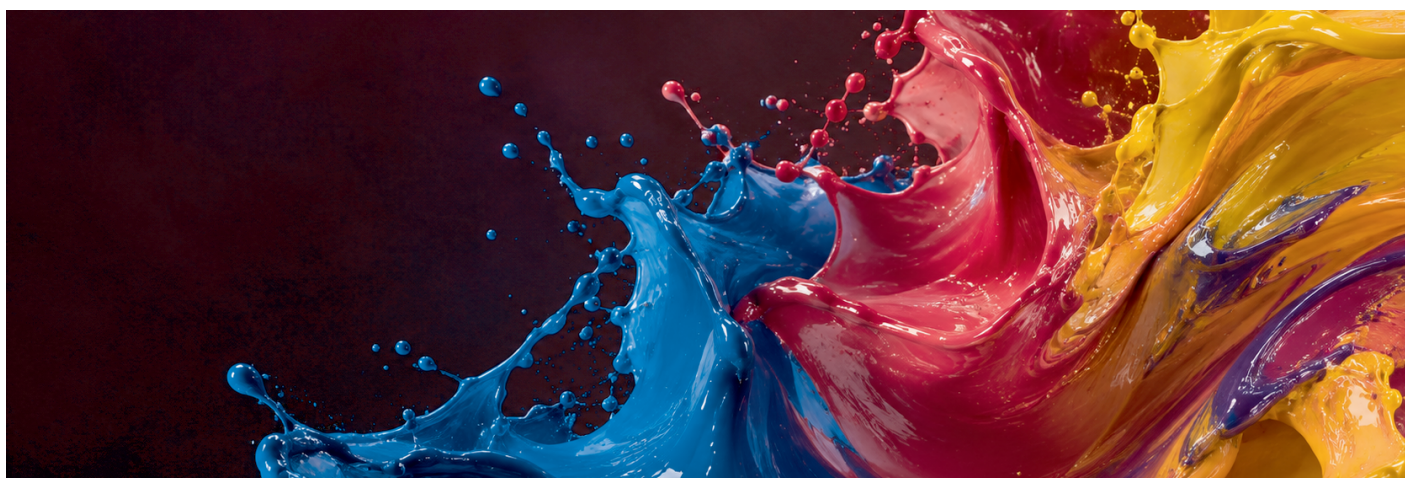

Keep containers tightly closed in a cool, dry place away from heat and sunlight. Follow the product label and current Safety Data Sheet for handling and storage.

Trial synthetic, metallised and other non-absorbent stocks separately. Confirm coating and lamination compatibility before use. Food-contact or low-migration applications require specific manufacturer approval.

Performance descriptions are qualitative. Actual drying and gloss depend on stock, ink film, dampening and pressroom conditions. Establish finishing time by trial. This sheet does not replace the Safety Data Sheet.

Where colours come to life

Three products One Lumaink family

Iran Shoraka manufactures printing inks, varnishes and pressroom products for printers in Iran and export markets. Our Lumaink family brings sheetfed offset inks and fountain-solution chemistry together for the pressroom.
